

Investment Option Summary

ANZ Smart Choice 1970s

October 2013

Description

This investment option is designed for investors born in the 1970s. It will automatically adjust the allocation between growth and defensive asset classes to become more conservative over time. Additionally, an active asset allocation process is employed as described in the below investment strategy.

Investment objective

This investment option seeks to match the return (including income and capital appreciation but before fees, charges and taxes) of the weighted exposure to the underlying asset classes which will change over time.

Investment strategy

The investment option will provide exposure to a mix of growth and defensive asset classes. The allocation to these classes will automatically adjust becoming more conservative over time. Additionally, an active asset allocation process may be utilised to increase or decrease your exposure to relevant asset classes within permitted ranges. This process is designed to optimise your investment performance by adjusting allocations to markets/asset classes which we believe will perform strongly or poorly in the future.

Minimum time horizon

5 years
