Country payment system attributes

ANZ prefers the use of ISO20022 messages that meet the CGI standards. For Payment and Account Management, it includes the following message types:

pain.001.001.03 CustomerCreditTransferInitiationV03

pain.002.001.03 CustomerPaymentStatusReportV03

camt.053.001.02 BankToCustomerStatementV02

Refer to the separately published ISO20022 Message Implementation Guides applicable to the relevant message for the full message schema, which should be used in conjunction with this document.

The section below details the expected data patterns and describes the data required to fulfil a payment initiation which will trigger the resulting acknowledgement and confirmation data files.

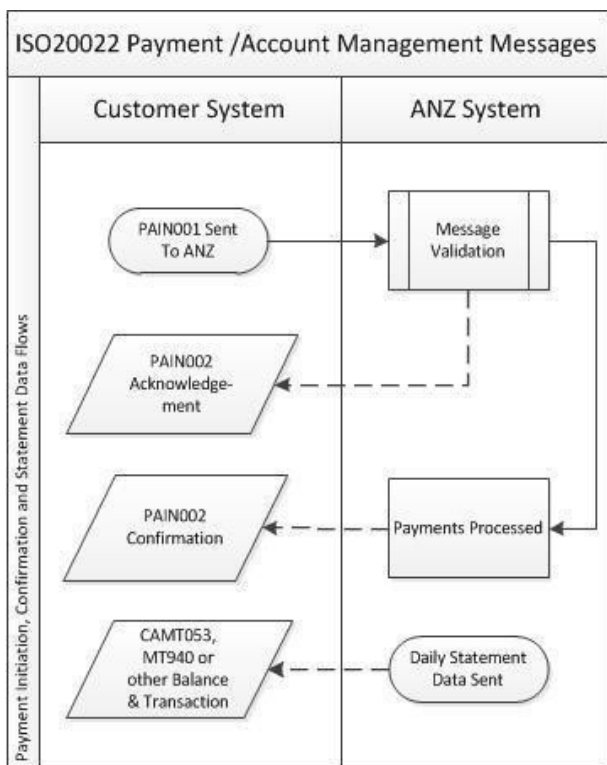

Typical customer payments integration data flow/pattern

The following data patterns are readily supported by ANZ. Where a deviation is required, please discuss your requirements with your ANZ Implementation Manager or ANZ Client Systems Integration Solution Consultant.

An XML message ANZ may contain multiple payment types and payments according to the ISO20022 PAIN001 rules. For customers initiating payments from accounts domiciled in multiple countries, either a single XML message can be used, or separate files/messages can be used for each country. Customers should discuss your preference during implementation.

The typical payment initiation and resulting reply file data patterns are illustrated below

Reply files are optional however at a minimum, rejected payments should be issued by PDF report either by the same incoming transfer method or email.

'EndToEndIdentification' <EndtoEndID> can be used as the key reference field for tracking result of payment initiation across reply files and daily transaction statement data.

Balance and Transaction Reporting can be delivered in customer preferred formats such as CAMT053, MT940 or SAP Multicash.

If customer requires to have 'payment instructions between companies belonging to the same group', please note to populate the following xml nodes:

Category purpose code, i.e. <PmtInf><PmtTpInf><CtgyPurp><Cd>INTC</Cd></CtgyPurp></PmtTpInf>

'Beneficiary code' is mandatory and to be represented in xml by the following two xml nodes:

Creditor ID, i.e. <CdtTrfTxInf><Cdtr><Id><Orgld><Othr><Id>. This node to show the code value which had been maintained in downstream payment system.

Creditor SchemeName, i.e. <CdtTrfTxInf> <Cdtr><Id><Orgld> <Othr><SchmeNm><Prtry>. This node should populate BENEFCIARY CODE to indicate the associated ID field's value meaning.

If it is required to populate Beneficiary bank's Clearing Member Identification, i.e.

<CdtTrfTxInf><CdtrAgt><FinInstnId><ClrSysMmbld><Mmbld>, it is mandatory to populate Beneficiary bank's Clearing System Identification code in one of the following xml node:

<CdtTrfTxInf><CdtrAgt><FinInstnId><ClrSysMmbld><ClrSysId><Cd> OR
<CdtTrfTxInf><CdtrAgt><FinInstnId><ClrSysMmbld><ClrSysId><Prtry>

Data required for Cross Border funds transfer

Data set required for Cross Border Funds Transfer (CBFT) is similar to domestic payment (ACH). The condition sought to determine a payment as being a CBFT is the country code within the Creditor Bank Identifier (BIC) differs to that of the Debtor Bank Identifier and therefore payment is not to the same country.

Note: Beneficiary Address (<Cdtr><PstlAdr><AdrLine>), City (<Cdtr><PstlAdr><TwnNm>) and Country (<Cdtr><PstlAdr><Ctry>) are mandatory pieces of information for Economic and Trade Sanctions checking.

Category Purpose is mandatory for international payments to China, India, Indonesia, Malaysia and UAE.

For example, Cross Border Payment in CNY currency to beneficiary in China requires Purpose code information as per below.

The below additional fields and options illustrate cross currency payment data required and, if applicable, foreign exchange rate and contract.

Field name	Pain.001 XML tag	Details
Bearer of Bank Charges	<ChrgBr> OR <CdtTrfTxInf><ChrgBr> (After Payment Amount Node)	Optional Values: “DEBT” means Our “CRED” means Beneficiary “SHAR” means Shared (Default)
Category Purpose Proprietary	<CdtTrfTxInf><PmtTplInf><Ctgy Purp><Prtry>	Payment Purpose code is mandatory for -CNY to beneficiary in China and -Beneficiary in IN/ID/MY/AE (Refer to code list in Appendix B, purpose code for CBFT to beneficiary in CN_IN_ID_MY_AE.xlsx)
Payment Amount	<CdtTrfTxInf><Amt> <InstdAmt>	Amount of money in the payment currency as order by the initiating party. Where present must include xml attribute Ccy with 3 char currency code. E.g. <InstdAmt Ccy=” USD”>10000
Equivalent Amount	<CdtTrfTxInf><Amt> <EqvtAmt><Amt>	Amount of money in the currency of the debit account
Currecny of Transfer	<CdtTrfTxInf><Amt> <EqvtAmt><CcyOfTrf>	Specifies the currency of transfer amount, which is different from the currency of the debtor’s account. Either “Payment Amount” or “Equivalent Amount” can be used but not both.

Field name	Pain.001 XML tag	Details
Exchange Rate	<XchgRateInf><XchgRate>	Optional field to specify the agreed exchange rate
Contract Identification	<XchgRateInf><CtrctId>	Optional field to specify the foreign exchange contract reference (Note: This pair of tags can be applied in all payment types as long as foreign exchange to be involved with pre-agreed/contract exchange rate.)
Creditor Bank Identifier	<CdtrAgt><FinInstnId><BIC>	Value should be 11-character BIC
Creditor Postal Address	<CdtTrfTxInf><Cdtr><PstlAdr>	Mandatory fields in CBFT
TownName	<TwnNm>	Beneficiary City in free narrative up to maximum 35 characters, and
Country	<Ctry>	Beneficiary Country in ISO Country code AddressLine in free narrative
