1. Scope of Information Disclosure

ANZ Bank (Thai) Public Company Limited (“ANZ Thai” or “the Bank”) incorporated as a commercial bank in Thailand, was given the banking license by The Ministry of Finance on 15 June 2015, whilst the Bank through its notification requirement under the banking license, has commenced its legal day-1 on 29 June 2015.

The Bank hereby discloses the capital maintenance information as specified in Bank of Thailand Notification No. SorNorSor 4/2556 dated 2 May 2013 Re: Disclosure of Capital Maintenance Information for Commercial Banks including the Liquidity Coverage Ratio as specified in Bank of Thailand Notification No. SorNorSor 2/2561 Re: Liquidity Coverage Ratio Disclosure Standards dated 25 January 2018.

2. Capital

2.1 Capital Structure

The Bank was registered and incorporated as a juristic person in Thailand under the Public Limited Company Act B.E. 2535 on 27 November 2014 with the start-up capital of THB 500 million and increased its registered capital (which was fully paid up) by another THB 19,500 million on 11 June 2015 to meet the minimum capital requirement of a banking license of THB 20,000 million.

The table below presents the Bank capital structure as at 30 September 2019 and 31 March 2019

Table 1: Capital Structure

	Unit : THB	
Item	30-Sep-19	31-Mar-19
1. Tier 1 capital	19,760,209,260	19,736,139,185
Common equity tier 1 (CET1)	19,760,209,260	19,736,139,185
Paid-up capital (common stock) deducted by buyback of common stock	20,000,000,000	20,000,000,000
Legal reserve	2,982,345	-
Net profits (losses)	(230,215,504)	(230,215,504)
Other comprehensive income	18,583,707	1,043,310
Less deductible items on Common equity tier 1*	(31,141,287)	(34,688,620)
2. Tier 2 capital	196,879,899	201,204,388
General provision for performing loans	196,879,899	201,204,388
3. Total regulatory capital (1+2)	19,957,089,159	19,937,343,573

* Intangible assets, and deferred tax asset (DTA)

2.2 Capital Adequacy

According to the Bank of Thailand’s guideline in supervision of capital, commercial banks are required to meet the minimum capital adequacy ratio. With effective from 1st January 2019 the minimum capital adequacy ratio is defined at 11.00%.

The approach applies to assess each risk for the capital adequacy as follows:

- Credit Risk Standardised Approach
- Market Risk Standardised Approach
- Operational Risk Basic Indicator Approach

The following tables represent minimum capital requirement for credit risk, market risk and operational risk as well as capital adequacy ratio of the Bank as at 30 September 2019 and 31 March 2019

Table 2 Minimum capital requirement for credit risk classified by type of assets under Standardised Approach (SA)

Unit : THB

Minimum capital requirement for credit risk classified by type of assets under the SA	30-Sep-19	31-Mar-19
Performing claims		
1 Claims on sovereign and central banks, multilateral development banks (MDBs), and non-central government public sector entities (PSEs) treated as claims on sovereign	-	-
2 Claims on financial institutions , non-central government public sector entities (PSEs) treated as claims on financial institutions, and securities firms	226,805,757	167,235,100
3 Claims on corporates , non-central government public sector entities (PSEs) treated as claims on corporate	2,240,071,091	2,185,025,918
4 Claims on retail portfolios	-	-
5 Claims on housing loans	-	-
6 Other assets	7,331,925	8,347,157
Non-performing claims	-	-
First-to-default credit derivatives and Securitisation	-	-
Total minimum capital requirement for credit risk under the SA	2,474,208,772	2,360,608,176

Table 3: Minimum capital requirement for market risk for positions in the trading book under Standardised Approach (SA)

Unit : THB

Minimum capital requirement for market risk	30-Sep-19	31-Mar-19
1. Standardised method	122,949,394	206,400,428
2. Internal model method	N/A	N/A
Total minimum capital requirement for market risk	122,949,394	206,400,428

Table 4: Minimum capital requirement for operational risk (Basic Indicator Approach)

Unit : THB

Minimum capital requirement for operational risk	30-Sep-19	31-Mar-19
1. Basic Indicator Approach	126,310,837	116,522,416
2. Standardised Approach	N/A	N/A
Total minimum capital requirement for operational risk	126,310,837	116,522,416

Table 5: Capital Adequacy Ratios

Unit : %

Ratio	30-Sep-19		31-Mar-19	
	Capital ratio of the bank	Minimum capital ratio according to the BOT regulations	Capital ratio of the bank	Minimum capital ratio according to the BOT regulations
1. Total capital to risk-weighted assets	80.61	11.00	81.72	11.00
2. Tier 1 capital to risk-weighted assets	79.81	8.50	80.90	8.50
3. Common equity tier 1 to risk-weighted assets	79.81	7.00	80.90	7.00

3. Risk Exposure and Assessment

3.1 Credit Risk

Credit Risk is the risk of financial loss resulting from a counterparty failing to fulfil its obligations, or from a decrease in credit quality of a counterparty resulting in a loss in value.

Risk Management of Credit Risk

ANZ Thai has a comprehensive framework to manage Credit Risk. The framework is top down, being defined by credit principles and policies. Credit policies, requirements and procedures cover all aspects of the credit life cycle such as transaction structuring, risk grading, initial approval, ongoing management and problem debt management. The effectiveness of the credit risk management framework is assessed through various compliance and monitoring processes. These, together with portfolio selection, define and guide the credit process, organisation and staff.

The primary responsibility for prudent and profitable management of credit risk assets and customer relationships rests with the business units. An independent credit risk management function is managed by the ANZ Thai Chief Risk Officer [CRO]. The Board, Credit Committee, the CRO or other individual Credit Approval Discretion (CAD) holders provide independent credit assessment and lending decisions. The CRO also performs key roles in portfolio management such as development and validation of credit risk measurement systems, loan asset quality reporting, and development of credit policies or requirements.

The authority to make credit decisions is delegated by the Board. Judgemental lending is made on a 'dual approval' basis, jointly by the business CAD holder in the business unit and the respective independent credit risk officer or by the Credit Committee. Individuals must be suitably skilled and accredited in order to be granted and retain a CAD. Credit Approval Discretions are reviewed on an annual basis, and may be varied based on the holder's performance.

The approach to management of Credit Risk incorporates monitoring and management processes for each of the following components of credit risk:

- Single-name concentration, in addition to the regulated single lending limit
- Industry sector concentration
- Country risk [definition: Transfer risk is the risk of loss caused by the unavailability of foreign exchange (convertibility) arising from the actions of the country's government such that ANZ Thai's counterparties are unable to settle their debts or obligations in the currency of the original contract].

ANZ Thai uses portfolio monitoring and analysis tools, technologies and techniques to assist with portfolio risk assessment and management. These assist in:

- Monitoring, analysing and reporting ANZ Thai's credit risk profile and progress in meeting portfolio objectives; and
- Assessing impact of emerging issues, and conducting ad-hoc investigations and analysis.

Credit risk reporting and analysis is managed by the Research & Analysis department of ANZ Thai, independent from lending or credit approval functions. Periodic reporting provides confirmation of the effectiveness of the process highlights emerging issues requiring attention and allows monitoring of portfolio trends by all levels of management and the ANZ Thai Board.

Collateral is used to mitigate credit risk, as the secondary source of repayment in case the counterparty cannot meet its contractual repayment obligations. Types of collateral typically taken by ANZ Thai include:

- Security over residential, commercial, industrial or rural property;
- Charges over business assets;
- Security over specific plant and equipment;
- Charges over cash deposits; and
- Guarantees and pledges.

Credit risk exposure under the Standardised Approach (SA)

The Bank calculates regulatory capital requirement for credit risk using the Standardised Approach (SA) methodology according to the Bank of Thailand's notification Re: Regulations for Credit Risk Asset Calculations for Commercial Banks Using the Standardised Approach (SA).

In setting risk weights of claims the Bank use rating assessed by External Credit Assessment Institutions (ECAIs) as below:

1. Standard and Poor's
2. Moody's Investors Service
3. Fitch Rating
4. Fitch Ratings (Thailand)
5. Thai Rating and Information Services Co., Ltd (TRIS)

In the absence of credit rating from ECAIs, then the non-rating risk weighted as defined by Bank of Thailand will apply.

Below table presents the outstanding amounts of significant on-balance sheet assets and off-balance sheet items as of 30 September 2019 and 2018 before adjusted by credit risk mitigation.

Table 6 : Outstanding amounts of significant on-balance sheet assets and off-balance sheet items before adjusted by credit risk mitigation

	Unit : THB	
Item	30-Sep-19	30-Sep-18
1. On-balance sheet assets	31,415,015,193	33,329,752,534

3.2 Market Risk

Market Risk stems from the ANZ Thai's trading and balance sheet activities and is the risk to the ANZ Thai's earnings arising from changes in interest rates, foreign exchange rates, credit spreads, volatility, and correlations or from fluctuations in bond, commodity or equity prices.

Risk Management of Market Risk

ANZ Thai has a detailed market risk management and control framework, to support its trading and balance sheet activities, which incorporates an independent risk measurement approach to quantify the magnitude of market risk within the trading and balance sheet portfolios. This approach, along with related analysis, identifies the range of possible outcomes that can be expected over a given period of time, and establishes the likelihood of those outcomes and allocates an appropriate amount of capital to support these activities.

Key ANZ Thai Market risk factors include:

- Interest rate risk is the potential loss arising from the change in the value of a financial instrument due to changes in market interest rates or their implied volatilities.
- Foreign Exchange or Currency risk is the potential loss arising from the decline in the value of a financial instrument due to changes in foreign exchange rates or their implied volatilities.

Market Risk is a specialist risk management unit independent of the business that is responsible for measuring and monitoring market risk. Market Risk have implemented policies and procedures to ensure that ANZ Thai's market risk exposures are managed within the appetite and limit framework set by the Board.

Table 16: Minimum capital requirements for each type of market risk under the Standardised Approach

Unit : THB

Minimum capital requirements for market risk under SA	30-Sep-19	31-Mar-19
Interest rate risk	111,392,875	190,549,975
Equity position risk	-	-
Foreign exchange rate risk	11,556,519	15,850,453
Commodity risk	-	-
Total minimum capital requirements	122,949,394	206,400,428

Table 17 : The effect of changes in interest rates to net earnings

Unit : THB

Currency	30-Sep-19	30-Sep-18
	Effect to net earnings	Effect to net earnings

Others	18,350,364	23,242,191
Total effect from changes in interest rate	84,155,238	115,136,185
% of anticipated net interest income for the next one year*	11	18

* The percentage changes in interest rates of 100 bps .

3.3 Operational Risk

Operational risk is defined as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. This definition includes legal risk, and the risk of reputational loss or damage arising from inadequate or failed internal processes, people and systems, but excludes strategic risk.

The Board of Directors has approved the ANZ Thai Operational Risk Management Policy which is an addendum to the ANZ Global Operational Risk Approach. This policy outlines specific Bank of Thailand policy requirements not specifically addressed in the ANZ Operational Risk Approach. The Risk Management Committee assist the Board in the effective discharge of its responsibilities for operational risk management and for the management of the relative compliance obligations. The committee also assist the Board by providing an objective oversight of the implementation by management the Bank risk management framework and its related operation and by enabling an institution-wide view of current and future risk position relative to its risk appetite and capital strength.

4. Liquidity Coverage Ratio (LCR)

The Bank's financial year ending on 30 September therefore the bank will use the data at the end of March for disclosure of the first-half data (Quarter 2), and use the data at the end of September for disclosure of the second-half data (Quarter 4).

Commercial banks are required to maintain the liquidity coverage ratio in accordance with the guideline as specified by the Bank of Thailand ("BOT"). This guideline aims to ensure that each bank has adequate liquidity to support short-term severe liquidity stress scenario. The minimum LCR, which is the ratio of High Quality Liquid Asset (HQLA) to total net cash outflow within the 30-day time horizon, of 60% was introduced on 1 January 2016 (B.E 2559) and increased by 10% each year until it reaches 100% in 2020 (B.E. 2563).

The LCR calculation is as follow.

$$\text{LCR} = \frac{\text{High Quality Liquid Asset (HQLA)}}{\text{Total Net Cash Outflows over the next 30 days}}$$

HQLA refers to unencumbered highly liquid assets with low risk and low volatility that can be easily monetized without any significant changes to their value, even in times of liquidity stress. All high quality liquid assets must also meet the minimum standards as stipulated by BOT. The value of each type of HQLA is after the application of both haircuts and any applicable caps as specified by BOT.

Net COF is equal to total expected cash outflows within the 30-day time horizon subtracted Cash inflow within the 30-day time horizon under liquidity stress scenario. The total expected cash inflow cannot exceed 75% of the total expected cash outflow. Each types of Cash inflows and cash outflows are subjected to inflow rate and run-off rate as specified by BOT.

The Bank's quarterly LCR which is an average of month-end value in each quarter is shown below.

Table 18 : Liquidity Coverage Ratio (LCR)**Unit: Million Baht**

Items	Quarter 4 – 2019 (Average)	Quarter 4 – 2018 (Average)
(1) Total high-quality liquid assets (HQLA)	13,262	24,134
(2) Total net cash outflows within the 30-day time horizon	4,069	13,056
(3) LCR* (%)	340%	189%
<i>Minimum LCR as specified by the Bank of Thailand (%)</i>	90%	80%

* LCR in Item (3) is not necessarily equal to the total high-quality liquid assets (Item (1)) divided by the total net cash outflows within the 30-day time horizon (Item (2))

The Bank's average LCR for the 3rd and the 4th quarter of 2019 in comparison with those of 2018 are shown below:

Table 19 : Average LCR for comparison**Unit: %**

Average LCR	2019 Average □	2018 Average □
3rd quarter (April-June)	374%	207%
4th quarter (July-September)	340%	189%

For the 4th quarter of 2019 (end of September 2019), the average LCR was 340%, well above the regulatory minimum requirement of 90%.

The average HQLA was 13,262million Baht (which is the average of HQLA as at the end of July - September2019), all HQLA are level 1 liquid assets comprised of cash, deposit at central bank , and debt securities issued or guaranteed by the government, central bank.

The average Net COF was 4,069 million Baht, which is the average of net cash outflows within 30-day time horizon as at the end of July - September 2019. The main contributors to net cash outflows were modelled outflows associated with the deposit and Interbank/Intergroup borrowing offset by cash inflows from loans and Interbank/Intragroup lending. While cash outflows associated with derivatives are material, these are largely offset by derivatives cash inflows.

The Bank assesses and monitors LCR and risk metrics on a daily basis. Key liquidity risk metrics involve a combination of prudential requirements and internally-developed stress scenarios of varying severity in order to provide greater confidence that Bank's balance sheet can withstand a range of different liquidity stress events.
