Glossary71

¹ Each table reference adopted in this document aligns to those required by APS 330 to be disclosed at full year.

Chapter 1 – Introduction

Purpose of this document

This document has been prepared in accordance with the Australian Prudential Regulation Authority (APRA) ADI Prudential Standard (APS) 330: Public Disclosure.

APS 330 Public Disclosure Prudential Standard requires locally-incorporated authorised deposit-taking institutions (ADIs) to meet minimum requirements for the public disclosure of key information on their capital, risk exposures, remuneration practices and, where applicable, leverage ratio, liquidity coverage ratio, net stable funding ratio and indicators for the identification of potential global systemically important banks, so as to contribute to the transparency of financial markets and to enhance market discipline.

This document is prepared for ANZ BH Pty Ltd (ANZ Bank HoldCo) in accordance with Board policy and the APS 330 reporting standard requirements. It presents information on the Group's Capital Adequacy and Risk Weighted Assets calculations for credit risk, securitisation, traded market risk, interest rate risk in the banking book and operational risk.

Group organisational structure

ANZ Group Holdings Limited (ANZGHL) is the listed parent company of the ANZ Group. Banking and certain non-banking businesses are separated into two groups, the ANZ Bank Group and ANZ Non-Bank Group. The ANZ Bank Group comprises Australia and New Zealand Banking Group Limited (ANZBGL), international regulated bank operations and insurance businesses. The ANZ Non-Bank Group comprises banking-adjacent businesses developed or acquired by the ANZ Group, to focus on bringing new technology and banking-adjacent services to the ANZ Group's customers, and a separate service company.

The APS 330 disclosure has been prepared on the level 2 basis with ANZ Bank HoldCo being the head of ANZ's Level 2 banking group (formerly Australia and New Zealand Banking Group Limited prior to the establishment of the scheme of arrangement of a non-operating holding company on 3 January 2023).

Basel in ANZ

APRA released new bank capital adequacy requirements applying to Australian incorporated registered banks, which are set out in APRA's Banking Prudential Standard documents. ANZ has implemented these new requirements from 1 January 2023. The new capital adequacy key requirements include changes to APS 110 Capital Adequacy (APS 110), APS 112 Capital Adequacy: Standardised Approach to Credit Risk (APS 112) and APS 113 Capital Adequacy: Internal Ratings-based Approach to Credit Risk (APS 113) with key features of the reforms including:

- improving the flexibility of the capital framework, through larger capital buffers that can be used by banks to support lending during periods of stress;
- changes to risk weighted assets (RWA) through more risk-sensitive risk weights increasing capital requirements for higher risk lending and decreasing it for lower risks;
- changes to loss given default rates (LGD) including approved use of an internal ratings-based (IRB) approved LGD model for mortgage portfolios;
- an increase in the IRB scaling factor (from 1.06x to 1.1x);
- requirement that IRB ADIs calculate and disclose RWA under the standardised approach and the introduction of a capital floor at 72.5% of standardised RWA; and
- use of prescribed New Zealand authority's equivalent prudential rules for the purpose of calculating the Level 2 regulatory capital requirement.

In addition, operational RWA is now calculated under APS 115 Capital Adequacy: Standardised Measurement Approach to Operational Risk (APS 115) which replaced the previous advanced methodology from December 2022.

Verification of disclosures

These Pillar 3 disclosures have been verified in accordance with Board-approved policy, including ensuring consistency with information contained in ANZ's Financial Report and in Pillar 1 returns provided to APRA. In addition, ANZ's external auditor has performed an agreed upon procedure engagement with respect to these disclosures.

Comparison to ANZ's Financial Reporting

These disclosures have been produced in accordance with regulatory capital adequacy concepts and rules, rather than with accounting policies adopted in ANZ's financial reports. As such, there are different areas of focus and measures in some common areas of these disclosures. These differences are most pronounced in the credit risk disclosures, for instance:

- The principal method for measuring the amount at risk is Exposure at Default (EAD), which is the estimated exposure owed on a credit obligation at the time of default. Under the Internal Ratings Based (IRB) approach in APS 113 Capital Adequacy: Internal Ratings-based Approach to Credit Risk, banks are accredited to provide their own estimates of EAD or use supervisory estimates for all exposures (drawn, commitments or contingents) reflecting the current balance as well as the likelihood of additional drawings prior to default. Note APS 113 no longer permits the use of own estimates (internally modelled credit conversion factors (CCFs)) for committed non-retail exposures and non-revolving retail, therefore ANZ apply supervisory CCFs as detailed in APS 112.
- Loss Given Default (LGD) is an estimate of the loss expected in the event of default. LGD is essentially calculated as the amount at risk (EAD) less expected net recoveries from realisation of collateral as well as any post default repayments of principal and interest.
- Most credit risk disclosures split ANZ's portfolio into regulatory asset classes, which span different areas of ANZ's internal divisional and business unit organisational structure.

Unless otherwise stated, all amounts are rounded to AUD millions.

Suncorp Bank Acquisition

On 18 July 2022, the Group announced an agreement to purchase 100% of the shares in SBGH Limited, the immediate non-operating holding company of Suncorp Bank. On 20 February 2024, the Australian Competition Tribunal announced it had authorised the proposed acquisition following the decision in August 2023 by the Australian Competition and Consumer Commission to not authorise the acquisition. The acquisition remains subject to satisfaction of certain conditions, including Federal Treasurer approval and certain amendments to the State Financial Institutions and Metway Merger Act 1996 (QLD). Australia and New Zealand Banking Group Limited (ANZBGL) will also have a termination right under the Suncorp Bank Sale Agreement if APRA issues a written communication to ANZBGL under or in connection with APS 222 Associations with Related Entities to the effect that ANZBGL must not proceed with completion of the acquisition. Assuming these conditions are satisfied, it is expected to occur in mid-calendar year 2024.

Chapter 2 – Capital and Capital Adequacy

Table 1 Capital Disclosure template

The head of the Level 2 Group to which this prudential standard applies is ANZ BH Pty Ltd (ANZ Bank HoldCo).

Table 1 of this chapter consists of a Common Disclosure template that assists users in understanding the differences between the application of the Basel III reforms in Australia and those rules as detailed in the document, Finalised Basel III post-crisis reforms issued by the Bank for International Settlements. The capital disclosure template in this chapter is the post January 2018 version as ANZ is fully applying the Basel III regulatory adjustments, as implemented by APRA.

The information in the lines of the template has been mapped to ANZ's Level 2 balance sheet, which adjusts for non-consolidated subsidiaries as required under APS 001: Definitions. Where this information cannot be mapped on a one-to-one basis, it is provided in an explanatory table. ANZ's material non-consolidated subsidiaries are also listed in this chapter.

Restrictions on Transfers of Capital within ANZ

ANZ operates branches and locally incorporated subsidiaries in many countries. These operations are capitalised at an appropriate level to cover the risks in the business and to meet local prudential requirements. This level of capitalisation may be enhanced to meet local taxation and operational requirements. Any repatriation of capital from subsidiaries or branches is subject to meeting the requirements of the local prudential regulator and/or the local central bank. Apart from ANZ's operations in New Zealand, local country capital requirements do not impose any material call on ANZ's capital base.

ANZ undertakes banking activities in New Zealand principally through its wholly owned subsidiary, ANZ Bank New Zealand Limited (ANZ New Zealand), which is subject to minimum capital requirements as set by the Reserve Bank of New Zealand (RBNZ). ANZ New Zealand maintains a buffer above the minimum capital base required by the RBNZ. This capital buffer has been calculated via the Internal Capital Adequacy Assessment Process undertaken for ANZ New Zealand, to ensure ANZ New Zealand is appropriately capitalised under stressed economic scenarios.

Table 2 Main features of capital instruments

As the main features of ANZ's capital instruments are updated on an ongoing basis, ANZ has provided this information separately in the Regulatory Disclosures section of its website.

Table 3 Capital adequacy, Table 4 Credit risk, Table 5 Securitisation

The above tables are produced at the quarters ending 30 June and 31 December.

Table 6 Capital adequacy - Capital Ratio and Risk Weighted Assets

The following table provides the composition of capital used for regulatory purposes and capital adequacy ratios.

| | Mar 24 | Sep 23 | Mar 23 |
|---|----------------|----------------|----------------|
| | \$M | \$M | \$M |
| Risk weighted assets | | | |
| Subject to Advanced Internal Rating Based (IRB) approach | | | |
| Corporate | 60,362 | 62,668 | 62,680 |
| Residential Mortgage ⁵ | 101,338 | 96,290 | 86,726 |
| Retail SME | 9,538 | 9,684 | 10,065 |
| Qualifying Revolving Retail | 3,344 | 3,243 | 3,325 |
| Other Retail | 1,664 | 1,644 | 1,709 |
| Credit risk weighted assets subject to Advanced IRB approach | 176,246 | 173,529 | 164,505 |
| Subject to Foundation IRB approach | | | |
| Corporate | 35,665 | 34,819 | 38,808 |
| Sovereign | 10,856 | 10,252 | 11,199 |
| Financial Institutions | 30,122 | 30,875 | 32,832 |
| Credit risk weighted assets subject to Foundation IRB approach | 76,643 | 75,946 | 82,839 |
| Credit risk Specialised Lending exposures subject to slotting approach⁶ | 3,579 | 3,369 | 3,577 |
| Subject to Standardised approach | | | |
| Corporate | 5,102 | 5,611 | 4,911 |
| Sovereign | 171 | 165 | 88 |
| Residential Mortgage | 1,853 | 2,065 | 1,809 |
| Other Retail | 92 | 44 | 32 |
| Other Assets | 3,790 | 3,255 | 4,138 |
| Credit risk weighted assets subject to Standardised approach | 11,008 | 11,140 | 10,978 |
| Credit Valuation Adjustment and Qualifying Central Counterparties | 5,304 | 4,000 | 3,449 |
| Credit risk weighted assets relating to securitisation exposures | 2,481 | 2,395 | 2,229 |
| Exposures of New Zealand banking subsidiaries⁷ | 73,186 | 78,662 | 77,717 |
| Total credit risk weighted assets | 348,447 | 349,041 | 345,294 |
| Market risk weighted assets | 11,863 | 10,264 | 11,737 |
| Operational risk weighted assets ⁸ | 43,274 | 42,319 | 42,319 |
| Interest rate risk in the banking book (IRRBB) risk weighted assets | 26,200 | 31,703 | 31,887 |
| RWA adjustment for the IRB capital floor | 2,995 | - | 4,277 |
| Total risk weighted assets | 432,779 | 433,327 | 435,514 |

⁵ While APRA approved ANZ's Australian Mortgages LGD model for regulatory capital purposes, a \$9.6 billion RWA overlay has been applied pending recalibration of the model.

⁶ Specialised Lending exposures subject to supervisory slotting approach are those where the main servicing and repayment is from the asset being financed and is considered project finance.

⁷ Includes \$14.2 billion credit RWA in supervisory overlays resulting from risk weight floors required by RBNZ. Refer to March 2024 ANZ NZ Disclosure Statement for details.

⁸ Includes a \$6.25 billion operational risk RWA overlay (\$500 million capital), subject to APRA's acceptance of ANZ's satisfactory remediation of matters identified through the Self-Assessments into Governance, Culture and Accountability.

Table 6 Capital adequacy - Capital Ratio and Risk Weighted Assets

| | Mar 24 \$M | Sep 23 \$M | Mar 23 \$M |

| Common Equity Tier 1 capital ratio ¹⁰ | 13.3% | 13.1% | 12.9% |

Credit Risk Weighted Assets (CRWA):

Credit RWA decreased \$0.6 billion in the half to \$348.4 billion. This includes:

- Volume growth (+\$7.2 billion) with an increase in Australia Mortgages, Institutional, and Australia Commercial divisions.
- Data, models and methodology (-\$7.2 billion) which includes,
 - continued refinement in process, data and associated methodology treatments post implementation of revised capital reform rules (-\$6.3 billion)
 - implementation of a new model relating to New Zealand rural exposures, and removal of associated RBNZ supervisory adjustment for corporate exposures (-\$3.0 billion); and partially offset by
 - an increase in Australian Home Loans which is largely an artifact of the current PD model's response to changes in product packages sold to ANZ customers. A new model which addresses this has been submitted for Regulatory approval (+\$2.1 billion).
- Foreign exchange and other movements (-\$0.6 billion).

⁹ RWA for residential mortgages for the Group excluding New Zealand banking subsidiaries exposures measured under the IRB approach is \$128.8 billion when calculated under the standardised approach.

¹⁰ On 9th October 2024, ANZ adjusted the following values for the period 30 September 2019 to 31 March 2024 to reflect the application of the \$500 million Operational Risk capital overlay to both Level 1 and Level 2 regulatory consolidations.

- Basel III APRA Level 1 Capital Ratios with reporting period impacts of: CET1 (5 bps) and other Capital Ratios (between 5 and 8 bps); and
- Level 1 Extended licensed entity Total Risk Weighted Assets with reporting period impact between \$1.3 billion and \$1.4 billion.

Market Risk, Operational Risk and IRRBB RWA

Traded Market Risk RWA increased by \$1.6 billion over the half, mainly driven by increased client flows resulting in increase in Standard VaR, Stressed VaR and Specific risk.

IRRBB RWA decreased \$5.5 billion over the half primarily due to an improvement in Embedded Losses partially offset by an increase in Repricing and Yield Curve Risk.

Operational Risk RWA increased \$1.0 billion over the half following the annual SMA model update to include the FY23 financial results.

Chapter 3 – Credit risk

Table 7 Credit risk – General disclosures

Exposure at Default in Table 7 represents credit exposure net of offsets for credit risk mitigation such as netting and financial collateral. It includes Advanced IRB, Specialised Lending and Standardised exposures, and excludes Securitisation exposures.

Table 7(b) part (i): Period end and average Exposure at Default ¹¹

| | | | Mar 24 | | |
|--|----------------------|---------------------|---|---|--------------------------|
| | Risk Weighted Assets | Exposure at Default | Average Exposure at Default for half year | Individual provision charge for half year | Write-offs for half year |

| Total | 4,299 | 421 | 4,040 |

¹⁵ Due to definitional differences, there is a variation in the split between ANZ's Individual Provision and Collective Provision for accounting purposes and the Specific Provision and Provisions held against performing exposures for regulatory purposes. This does not impact total provisions, and essentially relates to the classification of collectively assessed provisions on defaulted accounts. The disclosures in this document are based on Individual Provision and Collective Provision, for ease of comparison with other published results.

¹⁷ Table 8(b) shows exposure at default after credit risk mitigation in each risk category.

Table 9 Credit risk – Disclosures for portfolios subject to IRB approaches**Portfolios subject to the Advanced IRB (AIRB), Foundation IRB (FIRB) approach, Retail IRB and supervisory slotting approach**

The following table summarises the types of borrowers and the rating approach adopted within each of ANZ's AIRB portfolios:

| IRB Asset Class | Borrower Type | Rating Approach |
|---|--|--|
| Corporate | Corporations, partnerships or proprietorships that do not fit into any other asset class Income Producing Real Estate | AIRB or FIRB where annual revenue > \$750m |
| Sovereign | Central and subnational governments Central banks Certain multilateral development banks | FIRB |
| Residential Mortgages | Exposures secured by residential property | Retail IRB |
| Qualifying Revolving Retail | Australian consumer credit cards <\$100,000 limit | Retail IRB |
| Other Retail | Other lending to consumers | Retail IRB |
| Specialised Lending subject to supervisory slotting | Project finance Object finance | Supervisory Slotting |
| Retail SME | Small business lending | Retail IRB |
| Financial Institutions | Banks, securities firms, insurance companies and leveraged funds | FIRB |
| Exposures of New Zealand banking subsidiaries | Includes all exposures in all asset classes for New Zealand banking subsidiaries | AIRB and Supervisory Slotting |

In addition, where ANZ is not accredited to use the IRB based approach to credit risk, ANZ applies the Standardised approach to credit risk.

The ANZ rating system

As an IRB bank, ANZ's internal models generate the inputs into regulatory capital adequacy to determine the risk weighted exposure calculations for both on- and off-balance sheet exposures, including undrawn portions of credit facilities, committed and contingent exposures and expected loss (EL) calculations. ANZ's internal models are used to generate the three key risk components that serve as inputs to the IRB approach to credit risk:

- PD is an estimate of the level of the risk of borrower default over a 12-month horizon. Borrower ratings are derived by way of rating models used both at loan origination and for ongoing monitoring.
- EAD represents the expected outstanding at the time of default, including an estimate of additional drawings prior to default (based on supervisory credit conversion factors), plus post-default drawings that were legally committed to prior to default.
- LGD is an estimate of the potential economic loss on a credit exposure, incurred as a consequence of obligor default, expressed as a percentage of the facility's EAD.

Effective maturity (M) is also calculated as an input to the risk weighted exposure calculation for Financial Institution, Sovereign and Corporate IRB asset classes.

For wholesale asset classes, ANZ's rating system has two separate and distinct dimensions that:

- Measure the PD, which is expressed by the Customer Credit Rating (CCR), reflecting the ability to service and repay debt.
- Measure the LGD as expressed by the Security Indicator (SI) ranging from A to G. The SI is calculated by reference to the percentage of a loan covered by security which can be realised in the event of default. This calculation uses standard ratios to adjust the current market value of collateral items to allow for historical realisation outcomes. The security-related SIs are supplemented with a range of other SIs which cover such factors as Cash cover (K), Subordinated debt (M), intra-group guarantees (I) and Sovereign (S). ANZ's LGD also includes recognition of the different legal and insolvency regimes in different countries, where this has been shown to influence recovery outcomes.

ANZ's corporate PD master scale is APRA approved and is made up of 27 rating grades. Each level/grade is separately defined and has a range of default probabilities attached to it. The PD master scale enables ANZ's rating system to be mapped to the grading's of external rating agencies, using the PD as a common element after ensuring that default definitions and other key attributes are aligned.

The following table demonstrates this alignment (for one-year PDs):

| ANZ CCR | Moody's | Standard & Poor's | PD Range |
|----------------|----------------|------------------------------|--------------------|
| 0+ to 1- | Aaa to Aa3 | AAA to AA- | 0.0000 - 0.0346% |
| 2+ to 3+ | A1 to Baa1 | A+ to BBB+ | 0.0347 - 0.1636% |
| 3= to 4+ | Baa2 to Baa3 | BBB to BBB- | 0.1637 - 0.4004% |
| 4= to 6= | Ba1 to B1 | BB+ to B+ | 0.4005 - 2.7550% |
| 6- to 7= | B2 to B3 | B to B- | 2.7551 - 9.7980% |
| 7- to 8+ | Caa1 to Caa3 | CCC+ to CCC- | 9.7981 - 27.1109% |
| 8= | Ca to C | CC to C | 27.1110 - 99.9999% |
| 8-, 9 and 10 | Default | Default | 100% |

In the retail asset classes, most facilities utilise credit rating scores. The scores are calibrated to PDs, and used to allocate exposures to homogenous pools, along with LGD and EAD.

¹⁸ In accordance with APS 330, EAD in Table 9(d) includes IRB (Advanced and Foundation) exposures and excludes Specialised Lending subject to supervisory slotting, Standardised, Securitisation and Equities.

¹⁹ Average EAD is calculated as total EAD post risk mitigants divided by the total number of credit risk generating exposures.

²⁰ Exposure-weighted average risk weight (%) is calculated as CRWA divided by EAD.

²¹ Exposure-weighted average risk weights exclude the impacts of RWA overlays and risk-weight floors.

| Total | (30) | 185 |

Factors impacting the loss experience.

The individually assessed credit impairment charge decreased \$85 million driven by the Corporate Asset and New Zealand banking subsidiaries due to lower impairments and higher write-backs and recoveries.

Write offs have decreased \$78 million driven by decreases in the Australia SME banking portfolios and New Zealand banking subsidiaries.

Table 9(f): Average estimated vs. actual PD, EAD and LGD – IRB

| Portfolio Type | Mar 24 | | | | |
|-----------------------------|------------------------|---------------------|---------------------------------------|-------------------------|----------------------|
| | Average Estimated PD % | Average Actual PD % | Average estimated to actual EAD ratio | Average Estimated LGD % | Average Actual LGD % |

| New Zealand Wholesale | 1.42 | 0.61 | 1.09 | 40.99 | 22.31 |
| New Zealand Retail | 2.19 | 0.99 | 1.03 | 30.8 | 7.9 |

APS 330 Table 9(f) compares internal credit risk estimates used in calculating regulatory capital with realised outcomes by portfolio types. It covers the PD, EAD and LGD estimates for the IRB portfolios.

Estimated PD and LGD for Specialised Lending exposures have not been provided, since APRA requires the use of supervisory slotting for Regulatory EL calculations. Actual PD, EAD ratio, Estimated LGD and Actual LGD for Sovereign exposures have not been provided, since there were no Sovereign defaults observed in ANZ Sovereign exposures for the observation period.

Wholesale Portfolios

The Prudential Standard changes from 1 January 2023 have introduced a number of new asset classes. Changes have been made in the historical time series used to determine wholesale portfolio averages.

- New Zealand wholesale obligors previously included in the Corporate, Sovereign, Bank and Specialised Lending portfolios are now reported under 'Exposures of New Zealand banking subsidiaries' asset class and hence moved into the New Zealand Wholesale portfolio;
- Income Producing Real Estate obligors formerly included in Specialised Lending have moved into the Corporate portfolio; and
- Non-bank Financial Institutions were moved into the new Financial Institutions portfolio, along with existing Bank obligors from prior periods.

The estimated PD is based on the average of the internally estimated long-run PDs for obligors that are not in default at the beginning of each financial year over the period of observation being 2009 to 2022. The actual PD is based on the number of defaulted obligors up to February 2024 compared to the total number of obligors measured.

The EAD ratio compares internally estimated EAD prior to default to realised EAD for defaulted obligors over the 15 years of observation being 2009 to February 2024. A ratio greater than 1.0 signifies that on average, the actual defaulted exposures are lower than the estimated exposures at the time of default.

The estimated LGD is the downturn LGD for accounts that defaulted at the beginning of each year during the observation period being 2015 to March 2022. The actual LGD is based on the average realised losses captured over the period for the accounts observed at the beginning and defaulted during the observation period. For non-retail portfolios, the estimated and actual LGDs are based on accounts that defaulted up to March 2022. Defaults occurring after March 2022 have been excluded from the analysis to allow sufficient time for workout period. Actual LGD for defaults where workouts were not finalised have been estimated to approximate the final actual loss. Defaults where no loss data has been captured are excluded from the LGD calculation.

A review of historical LGD data is currently being undertaken and may result in changes to Average Actual LGD numbers detailed above.

Retail Portfolios

The estimated PD is based on the average of the internally estimated long-run PDs for obligors that are not in default at March of each year over the period of observation being 2019 to 2023. The actual PD is based on the number of defaulted obligors up to March 2024 compared to the total number of obligors measured.

The EAD ratio compares internally estimated EAD prior to default to realised EAD for defaulted obligors over the period of observation being 2019 to 2023. A ratio greater than 1.0 signifies that on average, the actual defaulted exposures are lower than the estimated exposures at the time of default.

The estimated LGD is the downturn LGD for accounts that defaulted at September of each year during the observation period being 2018 to 2022. The actual LGD is based on the average realised losses over the period for the accounts observed at the beginning and defaulted during the observation period. Defaults occurring after March 2024 have been excluded from the analysis to allow sufficient time for workout period.

ANZ does not have any Securitisation exposures subject to early amortisation or using Standardised approach.

Table 12(w): Trading Book: Resecuritisation - Aggregate amount of resecuritisation exposures retained or purchased

ANZ does not have any retained or purchased Resecuritisation exposures.

Chapter 5 – Market risk

Table 13 Market risk – Standard approach

ANZ uses the standard model approach to measure market risk capital for specific risk²⁶ (APRA does not currently permit Australian banks to use an internal model approach for this).

Table 13(b): Market risk – Standard approach ²⁷

| | Mar 24 \$M | Sep 23 \$M | Mar 23 \$M |
|--|---------------|---------------|---------------|
| Interest rate risk | 156 | 114 | 132 |
| Equity position risk | - | - | - |
| Foreign exchange risk | - | - | - |
| Commodity risk | - | - | - |
| Total | 156 | 114 | 132 |
| Risk Weighted Assets equivalent | 1,950 | 1,425 | 1,650 |

²⁶ Specific risk is the risk that the value of a security will change due to issuer-specific factors. It applies to interest rate and equity positions related to a specific issuer.

²⁷ RWA equivalent is the capital requirement multiplied by 12.5 in accordance with APS 110.

Table 14 Market risk – Internal models approach**Table 14(f): Value at Risk (VaR) and stressed VaR over the reporting period ²⁸**

| 99% 1 Day Value at Risk (VaR) | Six months ended Mar 24 | | | |

IRRBB stress testing methodology

Stress tests within ANZ include standard and extraordinary tests. These tests are used to highlight potential risk which may not be captured by VaR, and how the portfolio might behave under extraordinary circumstances. Standard stress tests include statistically derived scenarios based on historical yield curve movements. These combine parallel shocks with twists and bends in the curve to produce a wide range of hypothetical scenarios at high statistical confidence levels, with the single worst scenario identified and reported. Extraordinary stress tests include interest rate moves from historical periods of stress and potential future scenarios, including behavioural characteristics as well as stresses to assumptions made about the repricing term of exposures. The rate move scenarios include changes over the stressed periods and the worst theoretical losses over the selected period are reported. Stresses of the repricing term assumptions investigate scenarios where actual repricing terms are significantly different to those modelled.

Chapter 8 – Leverage and Liquidity Coverage Ratio

Leverage Ratio

The Leverage Ratio requirements are part of the Basel Committee on Banking Supervision (BCBS) Basel III capital framework. It is a simple, non-risk based supplement or backstop to the current risk based capital requirements and is intended to restrict the build-up of excessive leverage in the banking system.

Consistent with the BCBS definition, APRA's Leverage Ratio compares Tier 1 Capital to the Exposure Measure (expressed as a percentage) as defined by APS 110: Capital Adequacy. APRA requires ADIs authorised to use the internal ratings based approach to credit risk to maintain a minimum leverage ratio of 3.5% from January 2023.

At 31 March 2024, the Group's Leverage Ratio of 5.4% was above the 3.5% minimum requirement. Table 18 below shows the Group's Leverage Ratio calculation as at 31 March 2024 and Table 19 summarises the reconciliation of accounting assets and leverage ratio exposure measure at 31 March 2024.

Table 18 Leverage Ratio

| | Mar 24 \$M | Sep 23 \$M | Mar 23 \$M |
|--|------------------|------------------|------------------|
| On-balance sheet exposures | | | |
| 1 On-balance sheet items (excluding derivatives and SFTs, but including collateral) | 996,723 | 996,947 | 1,025,480 |
| 2 (Asset amounts deducted in determining Basel III Tier 1 capital) | (11,848) | (12,284) | (11,965) |
| 3 Total on-balance sheet exposures (excluding derivatives and SFTs) | 984,875 | 984,663 | 1,013,515 |
| Derivative exposures | | | |

Liquidity Risk Overview, Management and Control Responsibilities

Liquidity risk is the risk that the Group is either:

- unable to meet its payment obligations (including repaying depositors or maturing wholesale debt) when they fall due; or
- does not have the appropriate amount, tenor and composition of funding and liquidity to fund increases in its assets.

Management of liquidity and funding risks are overseen by the Group Asset and Liability Committee (GALCO). The Group's liquidity and funding risks are governed by a set of principles approved by the Board Risk Committee (BRC) and include:

- maintaining the ability to meet all payment obligations in the immediate term;
- ensuring that the Group has the ability to meet 'survival horizons' under a range of ANZ specific, and general market, liquidity stress scenarios, at a country and Group-wide level, to meet cash flow obligations over the short to medium term;
- maintaining strength in the Group's balance sheet structure to ensure long term resilience in the liquidity and funding risk profile;
- ensuring the liquidity management framework is compatible with local regulatory requirements;
- preparing daily liquidity reports and scenario analysis to quantify the Group's positions;
- targeting a diversified funding base to avoid undue concentrations by investor type, maturity, market source and currency;
- holding a portfolio of high quality liquid assets to protect against adverse funding conditions and to support day-to-day operations; and
- establishing detailed contingency plans to cover different liquidity crisis events.

Key Areas of Measurement for Liquidity Risk

Scenario modelling of funding sources

Group's liquidity risk appetite is defined by a range of regulatory and internal liquidity metrics mandated by the ANZBGL Board. The metrics cover a range of scenarios of varying duration and level of severity.

The objective of this framework is to:

- Provide protection against shorter term extreme market dislocation and stress.
- Maintain structural strength in the balance sheet by ensuring that an appropriate amount of longer-term assets are funded with longer-term funding.
- Ensure that no undue timing concentrations exist in the Group's funding profile.

Key components of this framework are the Liquidity Coverage Ratio (LCR), which is a severe short term liquidity stress scenario and Net Stable Funding Ratio (NSFR) a longer term structural liquidity measure, both of which are mandated by banking regulators including APRA.

Liquid assets

Group holds a portfolio of high quality (unencumbered) liquid assets to protect Group's liquidity position in a severely stressed environment and to meet regulatory requirements. High quality liquid assets comprise three categories consistent with Basel III LCR requirements:

- Highest-quality liquid assets (HQLA1) - cash and highest credit quality government, central bank or public sector securities eligible for repurchase with central banks to provide same-day liquidity.
- High-quality liquid assets (HQLA2) - high credit quality government, central bank or public sector securities, high quality corporate debt securities and high quality covered bonds eligible for repurchase with central banks to provide same-day liquidity.
- Alternative liquid assets (ALA) - eligible securities that the RBNZ will accept in its domestic market operations.

Group monitors and manages the size and composition of its liquid assets portfolio on an ongoing basis in line with regulatory requirements and the risk appetite set by the ANZBGL Board.

Liquidity crisis contingency planning

ANZBGL Group maintains APRA-endorsed liquidity crisis contingency plans for analysing and responding to a liquidity threatening event at a country and ANZBGL Group-wide level. Key liquidity contingency crisis planning requirements and guidelines include:

| Ongoing business management | Early signs/ mild stress | Severe stress |
|--|--|---|
| <ul style="list-style-type: none"> • establish crisis/severity levels • liquidity limits • early warning indicators | <ul style="list-style-type: none"> • monitoring and review • Management actions not requiring business rationalisation | <ul style="list-style-type: none"> • activate contingency funding plans • management actions for altering asset and liability behaviour |
| <p><u>Assigned responsibility for internal and external communications and the appropriate timing to communicate.</u></p> | | |

Since the precise nature of any stress event cannot be known in advance, we design the plans to be flexible to the nature and severity of the stress event with multiple variables able to be accommodated in any plan.

Group funding

Group monitors the composition and stability of its funding so that it remains within the Group's funding risk appetite. This approach ensures that an appropriate proportion of the Group's assets are funded by stable funding sources, including customer deposits; longer-dated wholesale funding (with a remaining term exceeding one year); and equity.

| Funding plans prepared | Considerations in preparing funding plans |
|---|--|
| <ul style="list-style-type: none"> 3 year strategic plan prepared annually annual funding plan as part of the ANZBGL Group's planning process forecasting in light of actual results as a calibration to the annual plan | <ul style="list-style-type: none"> customer balance sheet growth changes in wholesale funding including: targeted funding volumes; markets; investors; tenors; and currencies for senior, secured, subordinated, hybrid transactions and market conditions |

Liquidity Coverage Ratio (LCR)

ANZBGL Group's average LCR for the 3 months to 31 March 2024 was 137.5% (31 December 2023: 129.8%) with total liquid assets exceeding net cash outflows by an average of \$77.8 billion. Through the period the LCR has remained within the range 130% to 147%. The liquid asset portfolio was made up of on average 55% (\$154.6 billion) cash and central bank reserves and 41% (\$116.5 billion) HQLA1 securities with the remaining mainly consisting of HQLA2 securities.

As per APRA requirements, liquid assets beyond the regulatory minimum are not included in the consolidated Group position where they are deemed non-transferable between geographies, in particular this applies to liquid assets held in New Zealand.

The main contributors to net cash outflows were modelled outflows associated with the bank's corporate and retail deposit portfolios, offset by inflows from maturing loans. While cash outflows associated with derivatives are material, these are effectively offset by derivative cash inflows. Modelled outflows are also included for market valuation changes of derivatives based on the past 24 months largest 30-day movements in collateral balances.

The Group has a well-diversified deposit and funding base avoiding undue concentrations by investor type, maturity, market source and currency. ANZBGL Group monitors and manages its liquidity risk on a daily basis including LCR by geography and currency. The Group's liquidity risk framework ensures ongoing monitoring of foreign currency LCR (including derivative flows) and sets limits at the Group level to ensure mismatches are managed effectively.

The Group's liquidity and funding management includes monitoring of liquidity across the Group, specifically for:

- Individual countries, including any local regulatory requirements.
- Consolidated ANZBGL Group Level 1 and 2 LCR
- AUD only LCR for Australia as well as Group Level

Other contingent funding obligations include outflows for revocable credit and liquidity facilities, trade finance related obligations, buybacks of domestic Australian debt securities and other contractual outflows such as interest payments.

Table 21 NSFR disclosure template

| 33 | Total RSF | | | | | 542,472 |
| 34 | Net Stable Funding Ratio (%) | | | | | 118.1% |

ANZ's NSFR as at 31 March 2024 was 118.1% (31 December 2023: 115.4%).

The main sources of Available Stable Funding (ASF) at March 2024 were deposits from Retail and SME customers, at 48%, with other wholesale funding at 28% and capital at 16% of the total ASF.

The majority of ANZ's Required Stable Funding (RSF) at March 2024 was driven by mortgages at 49% and other lending to non-FI customers at 29% of the total RSF.

Glossary

| | |
|--|--|
| ADI | Authorised Deposit-taking Institution. |
| Basel III Credit Valuation adjustment (CVA) capital charge | CVA charge is an additional capital requirement under Basel III for bilateral derivative exposures. Derivatives not cleared through a central exchange/counterparty are subject to this additional capital charge and also receive normal CRWA treatment under Basel II principles. |
| Collectively Assessed Provision for Credit Impairment | Collectively assessed provisions for credit impairment represent the Expected Credit Loss (ECL) calculated in accordance with AASB 9 Financial Instruments (AASB 9). These incorporate forward looking information and do not require an actual loss event to have occurred for an impairment provision to be recognised. |
| Credit exposure | The aggregate of all claims, commitments and contingent liabilities arising from on- and off-balance sheet transactions (in the banking book and trading book) with the counterparty or group of related counterparties. |
| Credit risk | The risk of financial loss resulting from a counterparty failing to fulfil its obligations, or from a decrease in credit quality of a counterparty resulting in a loss in value. |
| Credit Valuation Adjustment (CVA) | Over the life of a derivative instrument, ANZ uses a CVA model to adjust fair value to take into account the impact of counterparty credit quality. The methodology calculates the present value of expected losses over the life of the financial instrument as a function of probability of default, loss given default, expected credit risk exposure and an asset correlation factor. Impaired derivatives are also subject to a CVA. |
| Days past due | The number of days a credit obligation is overdue, commencing on the date that the arrears or excess occurs and accruing for each completed calendar day thereafter. |
| Exposure at Default (EAD) | Exposure At Default is defined as the expected facility exposure at the date of default. |
| Impaired assets (IA) | Facilities are classified as impaired when there is doubt as to whether the contractual amounts due, including interest and other payments, will be met in a timely manner. Impaired assets include impaired facilities, and impaired derivatives. Impaired derivatives have a credit valuation adjustment (CVA), which is a market assessment of the credit risk of the relevant counterparties. |
| Impaired loans (IL) | Impaired loans comprise of drawn facilities where the customer's status is defined as impaired. |
| Individual provision charge (IPC) | Individual provision charge is the amount of expected credit losses on financial instruments assessed for impairment on an individual basis (as opposed to on a collective basis). It takes into account expected cash flows over the lives of those financial instruments. |
| Individually Assessed Provisions for Credit Impairment | Individually assessed provisions for credit impairment are calculated in accordance with AASB 9 Financial Instruments (AASB 9). They are assessed on a case-by-case basis for all individually managed impaired assets taking into consideration factors such as the realisable value of security (or other credit mitigants), the likely return available upon liquidation or bankruptcy, legal uncertainties, estimated costs involved in recovery, the market price of the exposure in secondary markets and the amount and timing of expected receipts and recoveries. |

| | |
|--|--|
| Internationally Comparable Basel III Capital Ratio | The Internationally Comparable Basel III CET1 ratios are ANZ's interpretation of the regulations documented in the Basel Committee publications; "Basel 3: A global regulatory framework for more resilient banks and banking systems" (June 2011) and "International Convergence of Capital Measurement and Capital Standards" (June 2006). They also include differences identified in APRA's information paper entitled International Capital Comparison Study (13 July 2015). |
| Market risk | <p>The risk to ANZ's earnings arising from changes in interest rates, foreign exchange rates, credit spreads, volatility, correlations or from fluctuations in bond, commodity or equity prices. ANZ has grouped market risk into two broad categories to facilitate the measurement, reporting and control of market risk:</p> <p>Traded market risk - the risk of loss from changes in the value of financial instruments due to movements in price factors for both physical and derivative trading positions. Trading positions arise from transactions where ANZ acts as principal with customers, financial exchanges or inter-bank counterparties.</p> <p>Non-traded market risk (or balance sheet risk) - comprises interest rate risk in the banking book and the risk to the AUD denominated value of ANZ's capital and earnings due to foreign exchange rate movements.</p> |
| Operational risk | The risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events including legal risk but excluding reputation risk. |
| Past due facilities | Facilities where a contractual payment has not been met or the customer is outside of contractual arrangements are deemed past due. Past due facilities include those operating in excess of approved arrangements or where scheduled repayments are outstanding but do not include impaired assets. |
| Qualifying Central Counterparties (QCCP) | QCCP is a central counterparty which is an entity that interposes itself between counterparties to derivative contracts. Trades with QCCP attract a more favorable risk weight calculation. |
| Recoveries | Payments received and taken to profit for the current period for the amounts written off in prior financial periods. |
| Restructured items | Restructured items comprise facilities in which the original contractual terms have been modified for reasons related to the financial difficulties of the customer. Restructuring may consist of reduction of interest, principal or other payments legally due, or an extension in maturity materially beyond those typically offered to new facilities with similar risk. |
| Risk Weighted Assets (RWA) | Assets (both on and off-balance sheet) are risk weighted according to each asset's inherent potential for default and what the likely losses would be in the case of default. In the case of non-asset backed risks (i.e., market and operational risk), RWA is determined by multiplying the capital requirements for those risks by 12.5. |
| Securitisation risk | The risk of credit related losses greater than expected due to a securitisation failing to operate as anticipated, or of the values and risks accepted or transferred, not emerging as expected. |
| Write-Offs | Facilities are written off against the related provision for impairment when they are assessed as partially or fully uncollectable, and after proceeds from the realisation of any collateral have been received. Where individual provisions recognised in previous periods have subsequently decreased or are no longer required, such impairment losses are reversed in the current period income statement. |
